PROBLEM STATEMENT: Connecting Surplus Food with People in Need

PROBLEM STATEMENT

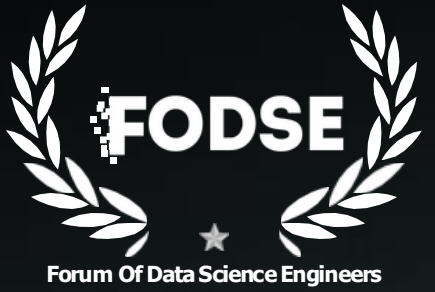

- ❖ 68.8 million tons of food are wasted every year in India.
- ❖ Around 40% of food at weddings and events goes unused.
- ❖ Nearly 190 million people go to bed hungry every night.
- ❖ Many orphanages, shelters, and old-age homes struggle to provide daily meals.

Core Problem

Despite surplus food availability, there is no efficient platform that connects food donors with organizations in need in real time, leading to massive food waste and continued hunger.

SOLUTION

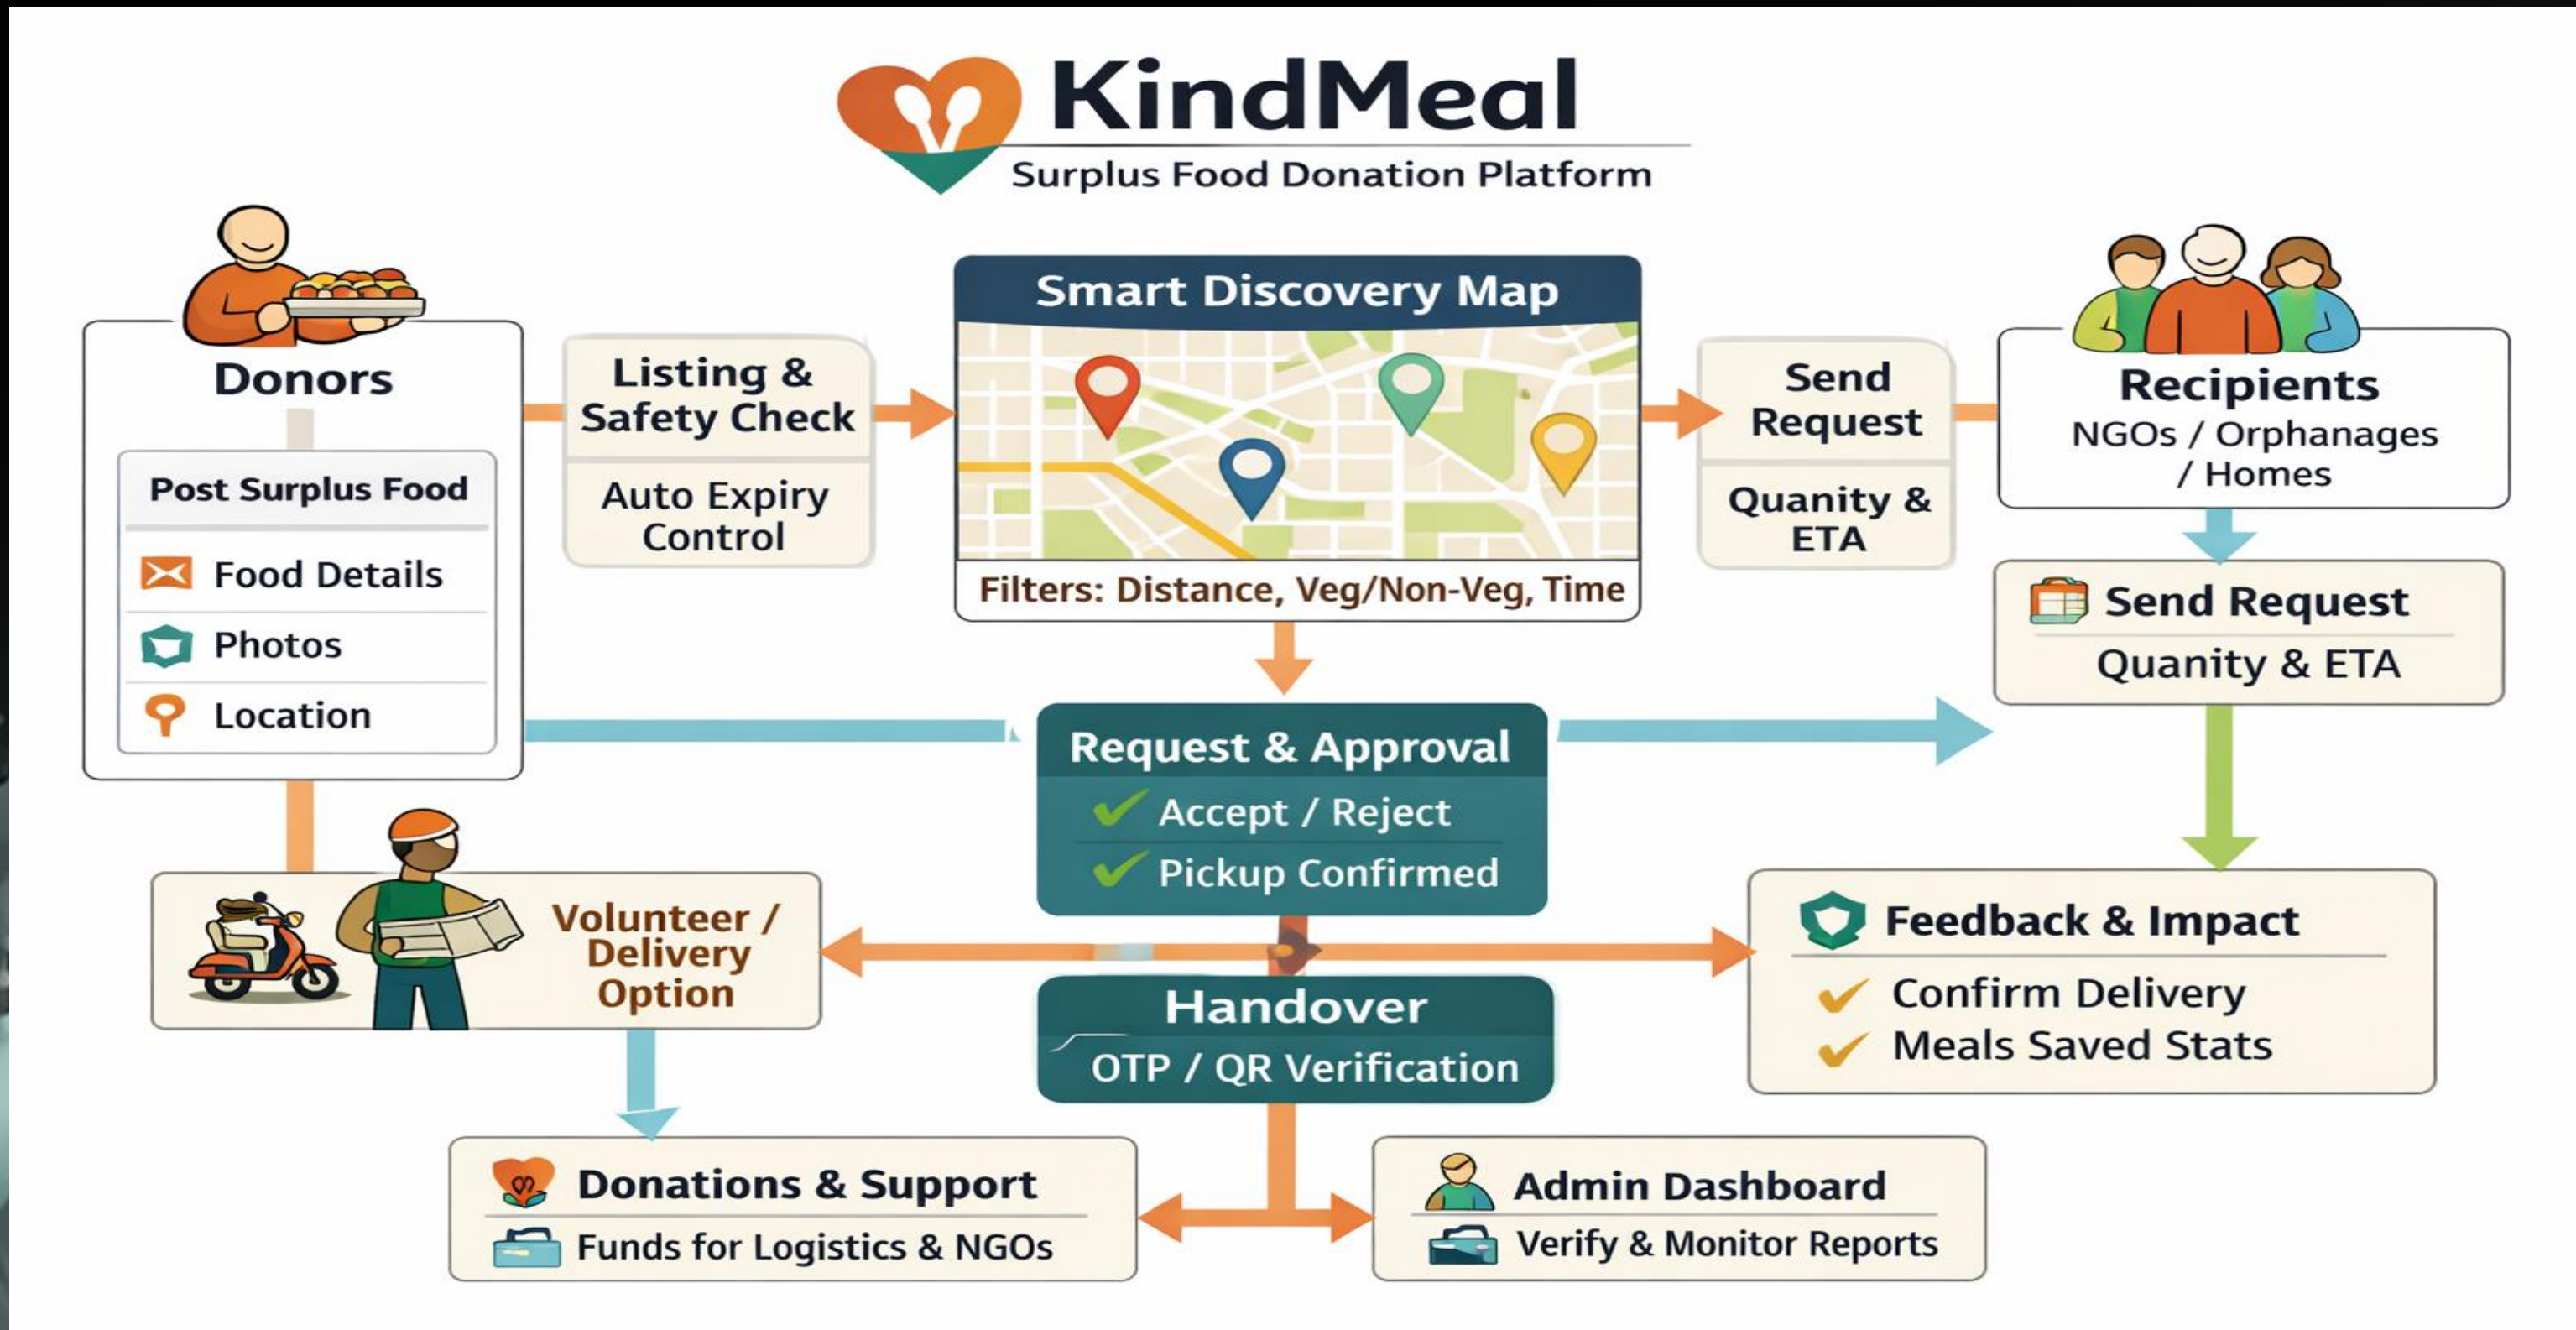

KindMeal is a surplus food donation platform that connects verified food donors with orphanages, old-age homes, and NGOs through a secure, map-based system.

Key Features

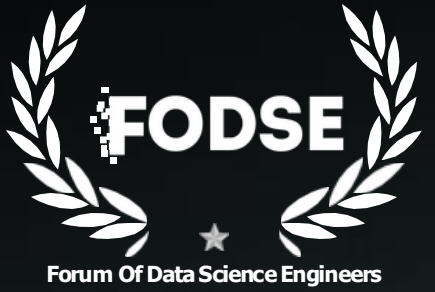

- ❖ Easy Food Listing – Donors can list surplus food with details like type, quantity, expiry time, and location.
- ❖ Nearby Discovery – NGOs and shelters can find available food donations nearby using location-based filtering.
- ❖ Request & Approval System – Recipients send requests to donors, who can accept or reject them instantly.
- ❖ Secure Verification – OTP or QR verification ensures safe and trusted food handover.
- ❖ Volunteer Support – Volunteers can assist in picking up and delivering food if needed.
- ❖ Smart Matching – The system suggests the nearest recipients and can split large donations for efficient distribution.
- ❖ Impact Tracking – Feedback and analytics help track meals served and food waste reduced.

FLOW DIAGRAM

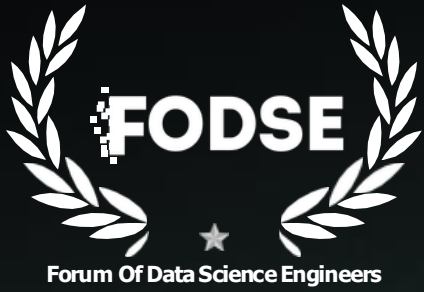

TECHNICAL REQUIREMENTS

⚙️ Core Tech Stack – KindMeal

- ❖ **Frontend:** React.js, Tailwind CSS, Google Maps API
- ❖ **Backend:** Node.js + Express.js
- ❖ **Database:** MongoDB / PostgreSQL
- ❖ **Authentication:** JWT, Firebase Auth / OTP
- ❖ **Notifications:** Twilio / Firebase Cloud Messaging
- ❖ **Cloud & Hosting:** AWS / Google Cloud, Vercel
- ❖ **Payments:** Stripe / Razorpay

NOVELTY / USE CASE

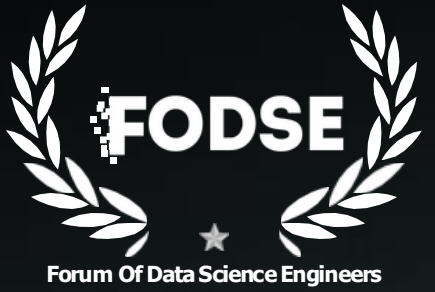

🍴 KindMeal – Real Use Cases & Features

- ❖ **Wedding/Event Hall:** 150 servings leftover → nearby orphanage requests 80 → pickup confirmed with OTP
- ❖ **Corporate Cafeteria:** Daily surplus at 3 PM → recurring donations to nearby shelter
- ❖ **Restaurant/Caterer:** Unsold cooked food near closing time → quick listing → nearby old-age home picks up
- ❖ **Recipient Logistics Gap:** Recipient cannot pick up → request volunteer pickup → volunteer delivers
- ❖ **Smart Matching:** Real-time map-based matching → nearest help first
- ❖ **Food Safety:** Auto expiry + countdown prevents unsafe/late pickup
- ❖ **Trust & Verification:** Verified recipients reduce misuse/fraud → OTP/QR proof ensures accountability
- ❖ **Impact Analytics:** Meals served, kg saved, CO₂ reduction estimate
- ❖ **Efficiency Add-on:** Smart suggestions split large donations across multiple recipients
- ❖ **Volunteer Mode:** Optional pickup/delivery support fills logistics gap

BUSINESS MODEL / TARGET MARKET

Business / Sustainability Model

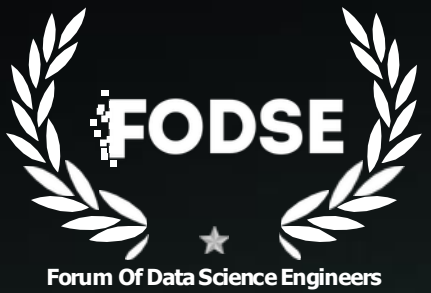

- ❖ **CSR Partnerships:** Corporates sponsor meals/logistics as part of CSR initiatives
- ❖ **B2B Subscription:** Caterers/venues pay for analytics, CSR impact reports, and priority support
- ❖ **Logistics Fee (Optional):** Small fee when volunteer/delivery partner is used
- ❖ **Donation Module:** Monetary support for NGOs/logistics; platform can run as non-profit or with minimal fee

Target Market

- ❖ **Donors:** Event hosts, caterers, wedding halls, hotels, restaurants, corporate cafeterias, colleges
- ❖ **Recipients:** Orphanages, old-age homes, shelters, NGOs, community kitchens
- ❖ **Supporters:** CSR teams, sponsors, individual donors
