PROBLEM STATEMENT : A Gamified Fitness Coach For Kids

PROBLEM STATEMENT

A Gamified Fitness Coach for Kids is an interactive platform that makes exercise feel like playing a game.

Instead of boring workouts, kids **complete** 🎮 **fun challenges** 🎮, **unlock levels** 🏆 and **earn rewards** 🏆 for staying active.

The system uses colorful visuals, simple activities, and **playful goals** ❤️ to keep children **engaged** and **excited about fitness**. By blending **games** with exercise, it helps kids build **healthy habits**, stay motivated, and enjoy being active every day.

Game Challenges

Physical Activity

Rewards & Levels

Healthy Habits

SOLUTION

→ 1. A machine learning model (like Google Teachable Machine) is trained to detect the player's physical jump through a webcam.

→ 2. The camera feed is processed in real time to recognize the "jump" action.

→ 3. When a jump is detected, the model sends a signal to the game engine (e.g., JavaScript/Unity).

→ 4. The game engine maps this signal to Mario's jump command in the game code.

→ 5. As a result, every time the player jumps physically, Mario performs a jump inside the game.
