

TEAM NAME: CODE RESCUERS

COLLEGE NAME: SRI VENKATESWARA COLLEGE OF ENGINEERING

PROBLEM STATEMENT: SMART COMMUNITY EMERGENCY RESPONSE SYSTEM

PROBLEM STATEMENT

Emergency response systems are often slow and centralized, causing critical delays in life-threatening situations.

Many emergencies occur before professional responders can arrive, especially in crowded cities or remote neighborhoods.

There is no efficient system that connects nearby trained volunteers with people in immediate need of help

Lack of real-time location sharing and instant communication prevents quick assistance.

SOLUTION

We propose an **SMART COMMUNITY EMERGENCY RESPONSE SYSTEM** that connects individuals in distress with nearby volunteers, doctors, and first responders using geo-spatial analytics and live GPS tracking. The system identifies the closest available helpers, sends instant emergency alerts, and provides live route navigation and communication for rapid assistance. This enables community-driven support during the critical golden minutes before official emergency services arrive.

“
Valuable minutes are lost during emergencies, which can lead to serious injury or loss of life.

This directly reflects the workflow where users trigger an SOS, nearby volunteers are located, and help is coordinated in real time.
”

Instant SOS Alerts notify nearby volunteers and responders.

Geo-spatial matching finds the closest available helper.

Real-time GPS tracking enables fast navigation to the victim.

Emergency chat allows immediate guidance before arrival.

Reduced response time during the critical golden minutes of emergencies.

FLOW DIAGRAM

TECHNICAL REQUIREMENTS

NOVELTY / USE CASE

NOVELTY

Community-Driven Emergency Response:
Connects victims with nearby volunteers.

Real-Time Volunteer Detection:
Finds nearby responders using GPS.

Instant SOS Alert System:
One-tap SOS sends alerts with location.

Live Tracking and Communication:
Enables real-time tracking and chat.

Faster Response Through Local Network:
Provides quicker help from nearby people.

USE CASES

Medical Emergencies:
Quick help before ambulance arrival.

Road Accidents:
Nearby volunteers provide immediate first aid.

Fire or Disaster Situations:
Alerts responders near the location.

Public Safety Incidents:
Sends quick alerts during dangerous situations.

Community Safety Programs:
Useful for universities and smart cities.
