

TEAM NAME : Codex AI

COLLEGE NAME : Sri Venkateswara College of Engineering

PROBLEM STATEMENT : Multi Agentic AI System for Public Grievance Management System

PROBLEM STATEMENT

Millions of Indian citizens face critical issues like unpaid wages, denied rations, and police inaction. Despite the urgency, the majority of these grievances are never resolved, creating a systemic barrier to basic rights.

SOLUTION

AGENT 01 Voice Input Agent

- Accepts Tamil/Hindi/Bengali voice notes
- Whisper AI transcribes speech to text
- Works on any ₹800 phone via WhatsApp
- Zero typing or English needed

AGENT 02 Classifier Agent

- LLM identifies exact grievance type
- Selects correct portal from 40+ databases
- Cites applicable law automatically
- Assigns priority: HIGH / MEDIUM / LOW

AGENT 03 Drafting Agent

- Converts broken speech → legal language
- References Payment of Wages Act, NFS Act
- Generates formal complaint letter
- Ready for govt portal in seconds

AGENT 04 Filing Agent

- Playwright bot opens real govt portal
- Auto-fills every form field
- Submits and captures ack number
- Covers CPGRAMS, Shram Suvidha, RTI

AGENT 05 Follow-Up Agent

- Checks status every 7 days automatically
- WhatsApp update sent to citizen
- Day 21 → RTI filed if no response
- Day 30 → Escalates to Labour Court

AGENT 06 NGO Dashboard

- Grievance heatmap by district
- Anonymous — zero privacy risk
- Analytics for NGOs + journalists
- Identifies systemic failures statewide

PROPOSED SOLUTION

GrievanceIQ is an AI-powered multi-agent system that automatically identifies, files, tracks, and escalates citizen grievances to the correct government authority — in the citizen's own language, through WhatsApp, at zero cost.

FLOW DIAGRAM

1. USER LAYER (Mobile / Web Interface)

- Voice grievance input
- Supports regional languages (Tamil, Hindi etc)
- Simple UI for low literacy users
- Upload complaint photos or documents

2. AI PROCESSING LAYER (Speech to Text Engine)

- Converts voice to text
- Detects language
- Prepares text for AI analysis

Grievance Classification Agent

- Detects grievance category
 - Identifies responsible department
 - Assigns complaint priority
- Example categories: Labour, Public utilities, Ration services, Police complaints

Filing & Automation Agent

- Prepares submission for portals
- Generates complaint ID
- Stores filing information

Complaint Drafting Agent

- Converts complaint into legal format
- Generates structured grievance document
- Adds clear complaint details

3. SYSTEM & GOVERNANCE LAYER

- Tracks complaint lifecycle
 - Displays status stages
- Filed → Received → In Review → Resolved

Follow-Up & Escalation

- Sends reminder to department
- Escalates if response delayed
- Improves grievance accountability

TECHNICAL REQUIREMENTS

NOVELTY / USE CASE

01

Voice-First Grievance Filing

Citizens can speak their complaint in their native language instead of filling complex English forms. AI converts speech into structured grievance data.

02

Multilingual Accessibility

The platform supports regional languages such as Tamil, Hindi, and Bengali, removing the language barrier that prevents millions from accessing government grievance systems.

03

AI Grievance Classification

An intelligent classifier automatically identifies the problem type (labour issue, ration denial, police complaint) and maps it to the correct government department.

04

Automated Legal Complaint Drafting

The system converts informal speech into a formal legal complaint, ensuring the grievance is written in proper bureaucratic language with relevant legal references.

05

Autonomous Complaint Filing

AI agents automatically submit complaints to the correct government portal such as CPGRAMS, labour portals, or state grievance systems.

06

Smart Follow-Up & Escalation

If authorities do not respond, the system tracks complaint status, sends reminders, and escalates the issue to higher officials automatically.

07

Public Grievance Heatmap Dashboard

A visual dashboard shows grievance hotspots across districts, helping NGOs, journalists, and policymakers identify systemic issues and improve governance.

BUSINESS MODEL / TARGET MARKET

IMPACT MODEL

POOR CITIZENS

50 Cr+ via WhatsApp — daily wage workers, farmers & rural communities. Always free.

NGO WORKERS

33 Lakh+ organisations filing on behalf of citizens using our web dashboard.

JOURNALISTS & RESEARCHERS

Heatmap data for investigative stories and district-level grievance analysis.

GOVT DEPARTMENTS

District analytics sold to state govts and NITI Aayog for policy decisions.

MARKET REACH

● FREE TIER

WhatsApp bot for all citizens.
3 complaints/month. Always free.
Core mission — never behind a paywall.

● NGO PLAN – ₹999/month

Unlimited cases. Bulk filing dashboard.
Analytics export. Priority support.

● GOVT ANALYTICS – Custom Pricing

District heatmap data sold to state governments and central ministries.

● GRANTS & CSR

UN SDG16 funding. Digital India grants.

Corporate CSR from TCS, Infosys, Wipro.
