

TEAM NAME: SIXTH SENSE CODERS

COLLEGE NAME: SRI VENKATESWARA COLLEGE OF ENGINEERING

PROBLEM STATEMENT: THE HUMAN BOTTLENECK: WHY MANUALLY SYNCING CUSTOMER QUERIES WITH BACKEND DELIVERY AND REVENUE DATA IS FAILING

PROBLEM STATEMENT

THE HUMAN BOTTLENECK IN MODERN BUSINESS OPERATIONS

Modern businesses face difficulty handling large volumes of customer messages while manually tracking deliveries, revenue, and product performance. An Agentic AI system is needed to understand customer queries, provide context-aware responses, and autonomously interact with backend data to respond, retrieve information, or trigger updates without human involvement

SOLUTION

PROACTIVE INTELLIGENCE: FROM ANOMALY DETECTION TO SELF-INITIATED ACTION

Cognitive Core (Not Just a Wrapper)

Context-Aware AI: Gemini-powered engine that handles NLP, forecasting, and anomaly detection.
Zero Human Bottlenecks: Independently decides whether to respond, query data, or trigger system actions.

Native Infrastructure (Built From Scratch)

100% Custom Backend: Proprietary delivery, revenue, and product-tracking engines. No third-party APIs.
Real-Time Data Layer: Multi-database architecture (PostgreSQL, TimeScale, Redis) synchronized via WebSockets.

Proactive Automation (Self-Initiated Outreach)

Anticipates Needs: Continuously monitors for unusual sales patterns, delayed deliveries, or inventory anomalies.
Acts Autonomously: self-initiates SMS/Email notifications to stakeholders before a query is even asked.

FLOW DIAGRAM

TECHNICAL REQUIREMENTS

Layer	Technology	Purpose
Frontend	Next.js 14, React, TailwindCSS	Owner Dashboard, Customer Chat, Simulation Console
API Gateway	FastAPI, Socket.io	REST endpoints, Real-time WebSocket, JWT Auth
AI Engine	Google Gemini 2.0,llama 3.2b (later finetuned)	Demand forecasting, Anomaly detection, NLP
Data Layer	PostgreSQL, TimescaleDB, Redis	Relational data, Time-series metrics, Caching
Notifications	EmailJS, Twilio	Email alerts, SMS notifications
Integrations	OCR (Tesseract), Supplier APIs	Invoice parsing, POS systems, Auto-ordering
Deployment	Vercel (Frontend), Docker, Railway	Cloud hosting, Containerization

DEV. PIPELINE:

Data ingestion from orders & messages

NLP intent detection

Agent decision logic execution

Data analytics & anomaly detection

Automated response / alert triggering

NOVELTY / USE CASE

FEASIBILITY

**Modular
architecture**

**Easy MVP
implementation**

**Scalable to multiple
domains**

**Low infrastructure
cost**

NOVELTY

**True Agentic AI
(not chatbot)**

**Autonomous
action without
prompts**

**Proactive business
intelligence**

**SMB-First
Design, Consent-
Based Automation**

BUSINESS MODEL / TARGET MARKET

Target Market

-  Small & Medium E-Commerce Businesses
-  Logistics & Delivery Companies
-  Retail Chains & Supermarkets
-  Restaurants & Food Delivery Businesses

Business Model

-  SaaS Subscription Model
-  Usage-Based Pricing
-  Enterprise Integrations
-  Data Insights Platform
(Future Expansion)

TEAM DETAILS

ROLE	NAME	STREAM/DEPT	YEAR	COLLEGE
FRONTEND DEVELOPER	CHAITANYA H	CSE	III	Sri Venkateswara College of Engineering
BACKEND DEVELOPER	AARYAN M	CSE	III	Sri Venkateswara College of Engineering
SCHEMA DESIGN	ARIVUNITHI R	CSE	III	Sri Venkateswara College of Engineering
SYSTEM DESIGN	DAYAALAN K T	CSE	III	Sri Venkateswara College of Engineering
FRONTEND DEVELOPER	ABISHIKA G	CSE	III	Sri Venkateswara College of Engineering
FRONTEND DEVELOPER	KAVYA	CSE	II	Sri Venkateswara College of Engineering
