

TEAM NAME : HUMAN INTELLIGENCE

COLLEGE NAME : SRI VENKATESWARA COLLEGE OF
ENGINEERING

PROBLEM STATEMENT : AI POWERED TRAVEL PLANNER WITH
SMART RECOMMENDATION SYSTEM

PROBLEM STATEMENT

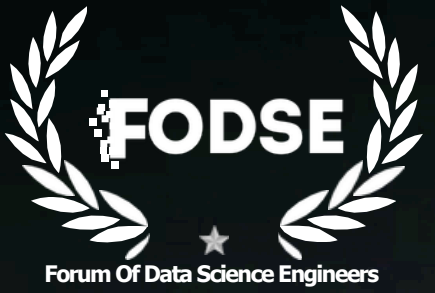

Planning a trip is often chaotic and time-consuming.

Users face problems such as:

- **Too many travel options leading to decision confusion**
- **Forget the belongings needed for trip such as sweaters, umbrella**
- **Difficulty finding destinations that match budget and preferences**
- **Searching separately for transport, hotels, activities and safety services such as hospitals**
- **Difficulty coordinating travel plans with friends or groups**
- **Lack of personalized travel recommendations**
- **Limited information about weather conditions and travel safety**

Because of this, users spend hours researching instead of enjoying travel.

SOLUTION

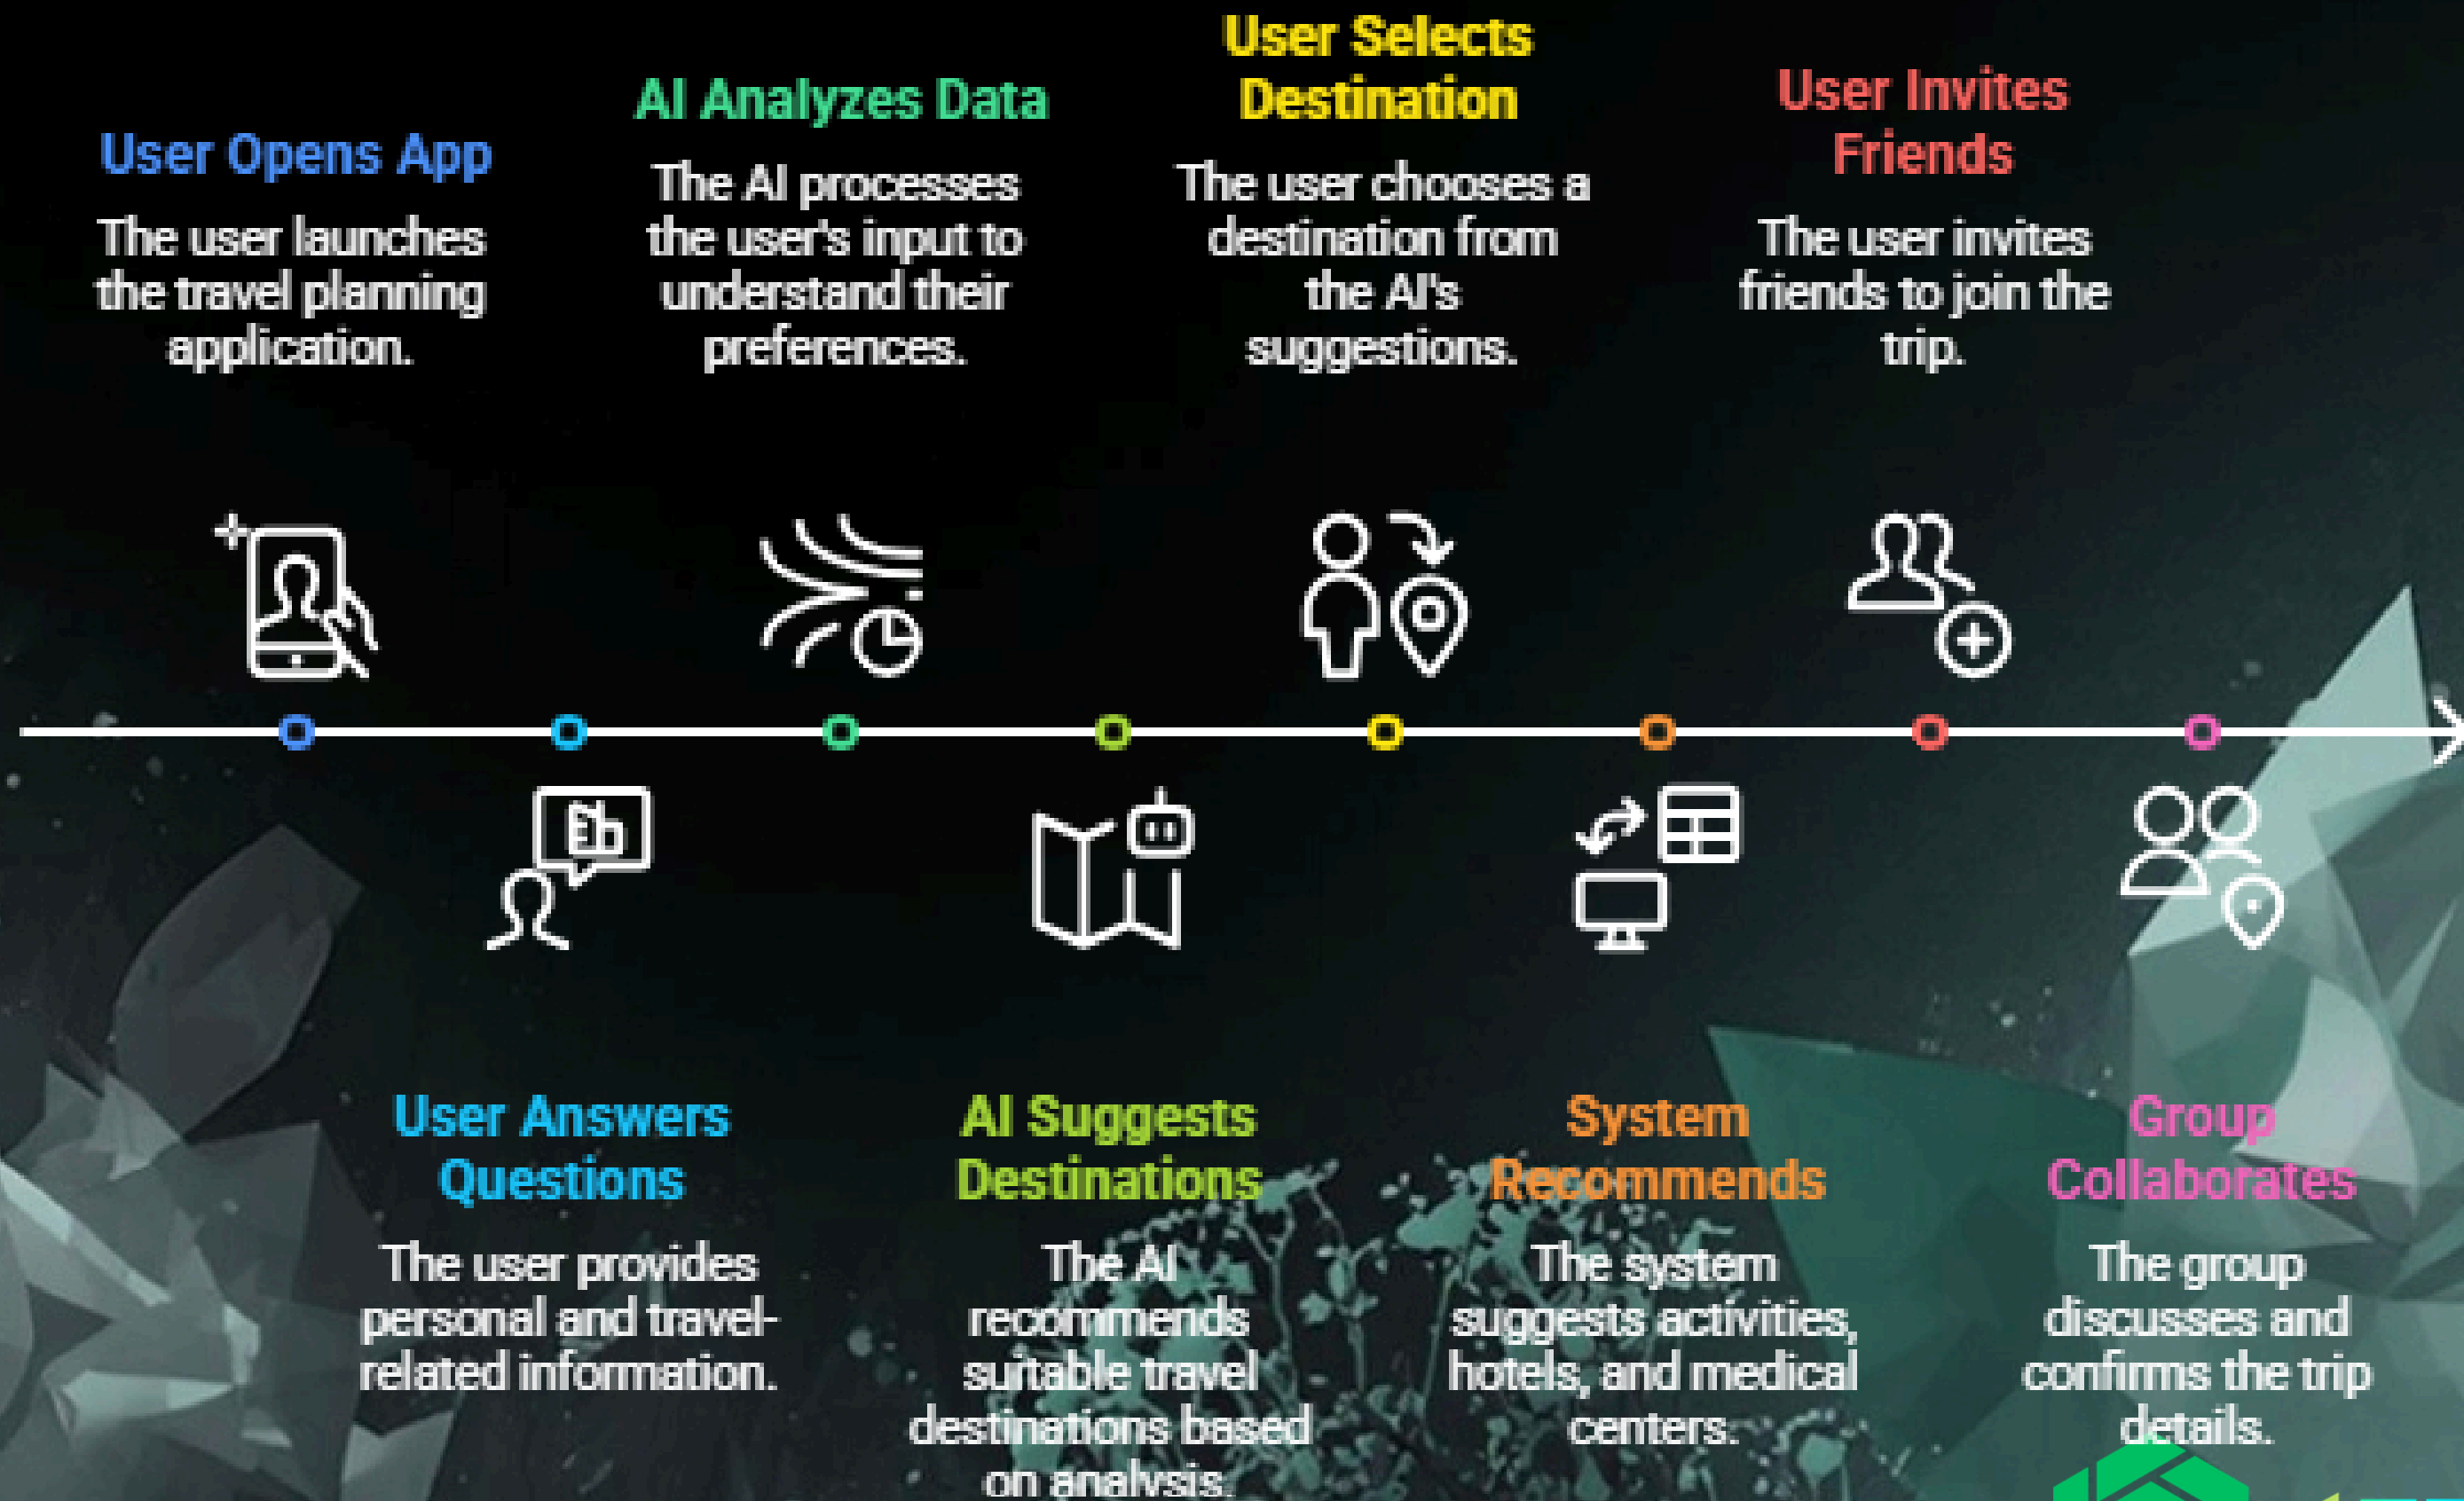

We propose an AI-powered Travel Planning Platform that simplifies the entire travel planning process.

- **Suggests travel destinations based on user mood, budget and time**
- **Recommends new location spots**
- **Show all mode of transports available for the trip with timings and expenses**
- **Finds hotels and rooms within the user's budget**
- **Shows ratings and reviews for the rooms and hotels based on the feedbacks and google integrations**
- **Displays nearby medical centers for any emergency or safety purpose**
- **Allows users to collaborate and plan trips with friends and split their expenses**
- **Help users to plan activities based on weather/climate for travel and prevents travel during bad weather conditions**
- **Includes currency conversion for international travel**

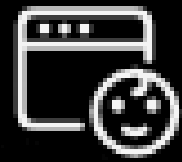

The system uses AI-based recommendations to generate a complete travel plan in seconds.

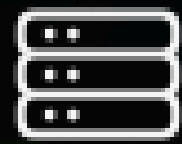

FLOW DIAGRAM

TECHNICAL REQUIREMENTS

Frontend

Backend

Database

APIs

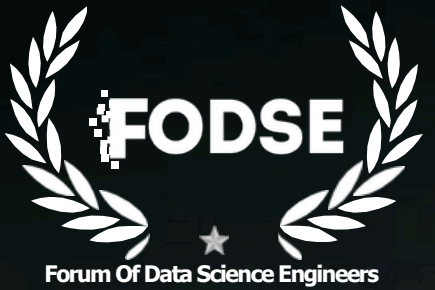

- Google Maps API
- Hotel / travel APIs
- Weather API

AI
Components

- Recommendation algorithm
- AI itinerary generator
- User preference analysis

NOVELTY / USE CASE

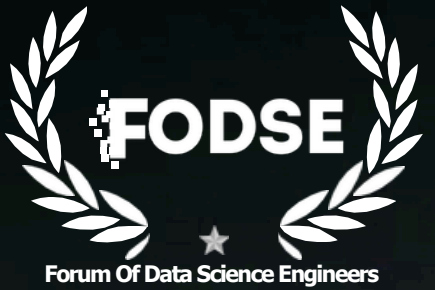

Novelty (Innovation)

1. **AI Mood-Based Travel Recommendation** – Suggests destinations based on user mood, budget, and travel duration.
2. **All-in-One Travel Platform** – Combines destination suggestion, hotel booking, transport booking, and activities in one system.
3. **AI Itinerary Generator** – Automatically creates a complete day-by-day travel plan.
4. **Smart Transport Comparison** – Compares train, bus, and flight options to recommend the best travel method.
5. **Prior weather prediction** - Displays real-time weather of the selected destination and Helps users plan activities,packing and Prevents travel during bad weather conditions

Use Cases

1. **Student & Budget Travelers** – Helps plan affordable trips quickly.
2. **Group Travel Planning** – Friends can collaborate, vote, and organize trips together.
3. **Family Vacation Planning** – Families can find safe destinations with nearby medical facilities.
4. **Solo Travelers** – Provides personalized travel suggestions and ready-made itineraries.

BUSINESS MODEL / TARGET MARKET

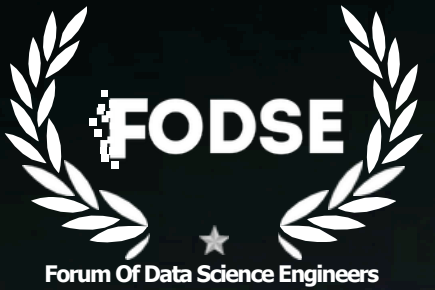

Business Model

- **Commission-Based Revenue** – Earn commission from hotel, train, flight, and bus bookings made through the platform.
- **Premium Subscription** – Offer advanced AI features like personalized itinerary planning and exclusive travel deals.
- **Sponsored Listings** – Hotels, travel agencies, and tourism companies can pay to appear in top recommendations.
- **Travel Advertisements** – Promote restaurants, tourist attractions, and travel services on the platform.
- **Partnerships with Travel Companies** – Collaborate with tour operators, transport services, and travel agencies.

Target Market

- **Students and Budget Travelers** – People planning low-cost trips and weekend getaways.
- **Friend Groups** – Groups planning vacations together and needing collaboration features.
- **Families** – Families looking for safe and organized travel plans.
- **Solo Travelers** – Individuals who want personalized travel recommendations.
- **Corporate Teams** – Companies organizing team outings and corporate trips.
