

TEAM NAME: TEAM DRACARYS

COLLEGE NAME: SRI VENKATESWARA COLLEGE OF ENGINEERING

PROBLEM STATEMENT:

Many people cannot understand legal documents because they are written in difficult English and complex legal words. People who speak regional languages or live in rural areas often find it hard to get legal help. Because of this, many people cannot easily access or understand legal information.

PROBLEM STATEMENT

Legal Information is Hard to Understand

Legal documents like laws, contracts, and official notices often use complex language. Because of this, many people find it difficult to understand what the documents mean without help from lawyers.

Language Barrier in Legal Knowledge

Most legal information is written using complicated legal terms. This makes it hard for common people to clearly understand legal rules without the guidance of lawyers.

Difficult to Access Legal Help

Getting help from lawyers can be difficult or expensive, especially for people in rural or remote areas. Many of these places also have poor internet, so online legal services do not work well. Because of this, many people do not get proper legal guidance when they need it.

Difficulty in Analyzing Legal Documents

Many people receive contracts or legal notices that may contain hidden conditions or misleading terms. Without proper knowledge or help from lawyers, it is hard for them to identify risks or possible fraud.

SOLUTION

◆ ● — SIMPLIFYING LEGAL INFORMATION WITH AI

Our solution JurisBot, is an AI assistant that helps people understand complex laws and rights in simple language. It answers legal questions and provides step-by-step guidance for tasks like filing a complaint or understanding contract requirements.

◆ ● — MULTILINGUAL LEGAL SUPPORT

The assistant supports regional languages such as Tamil, Telugu, Hindi, and English. Users can interact through text or voice, and the AI responds in their preferred language, making legal information accessible to everyone.

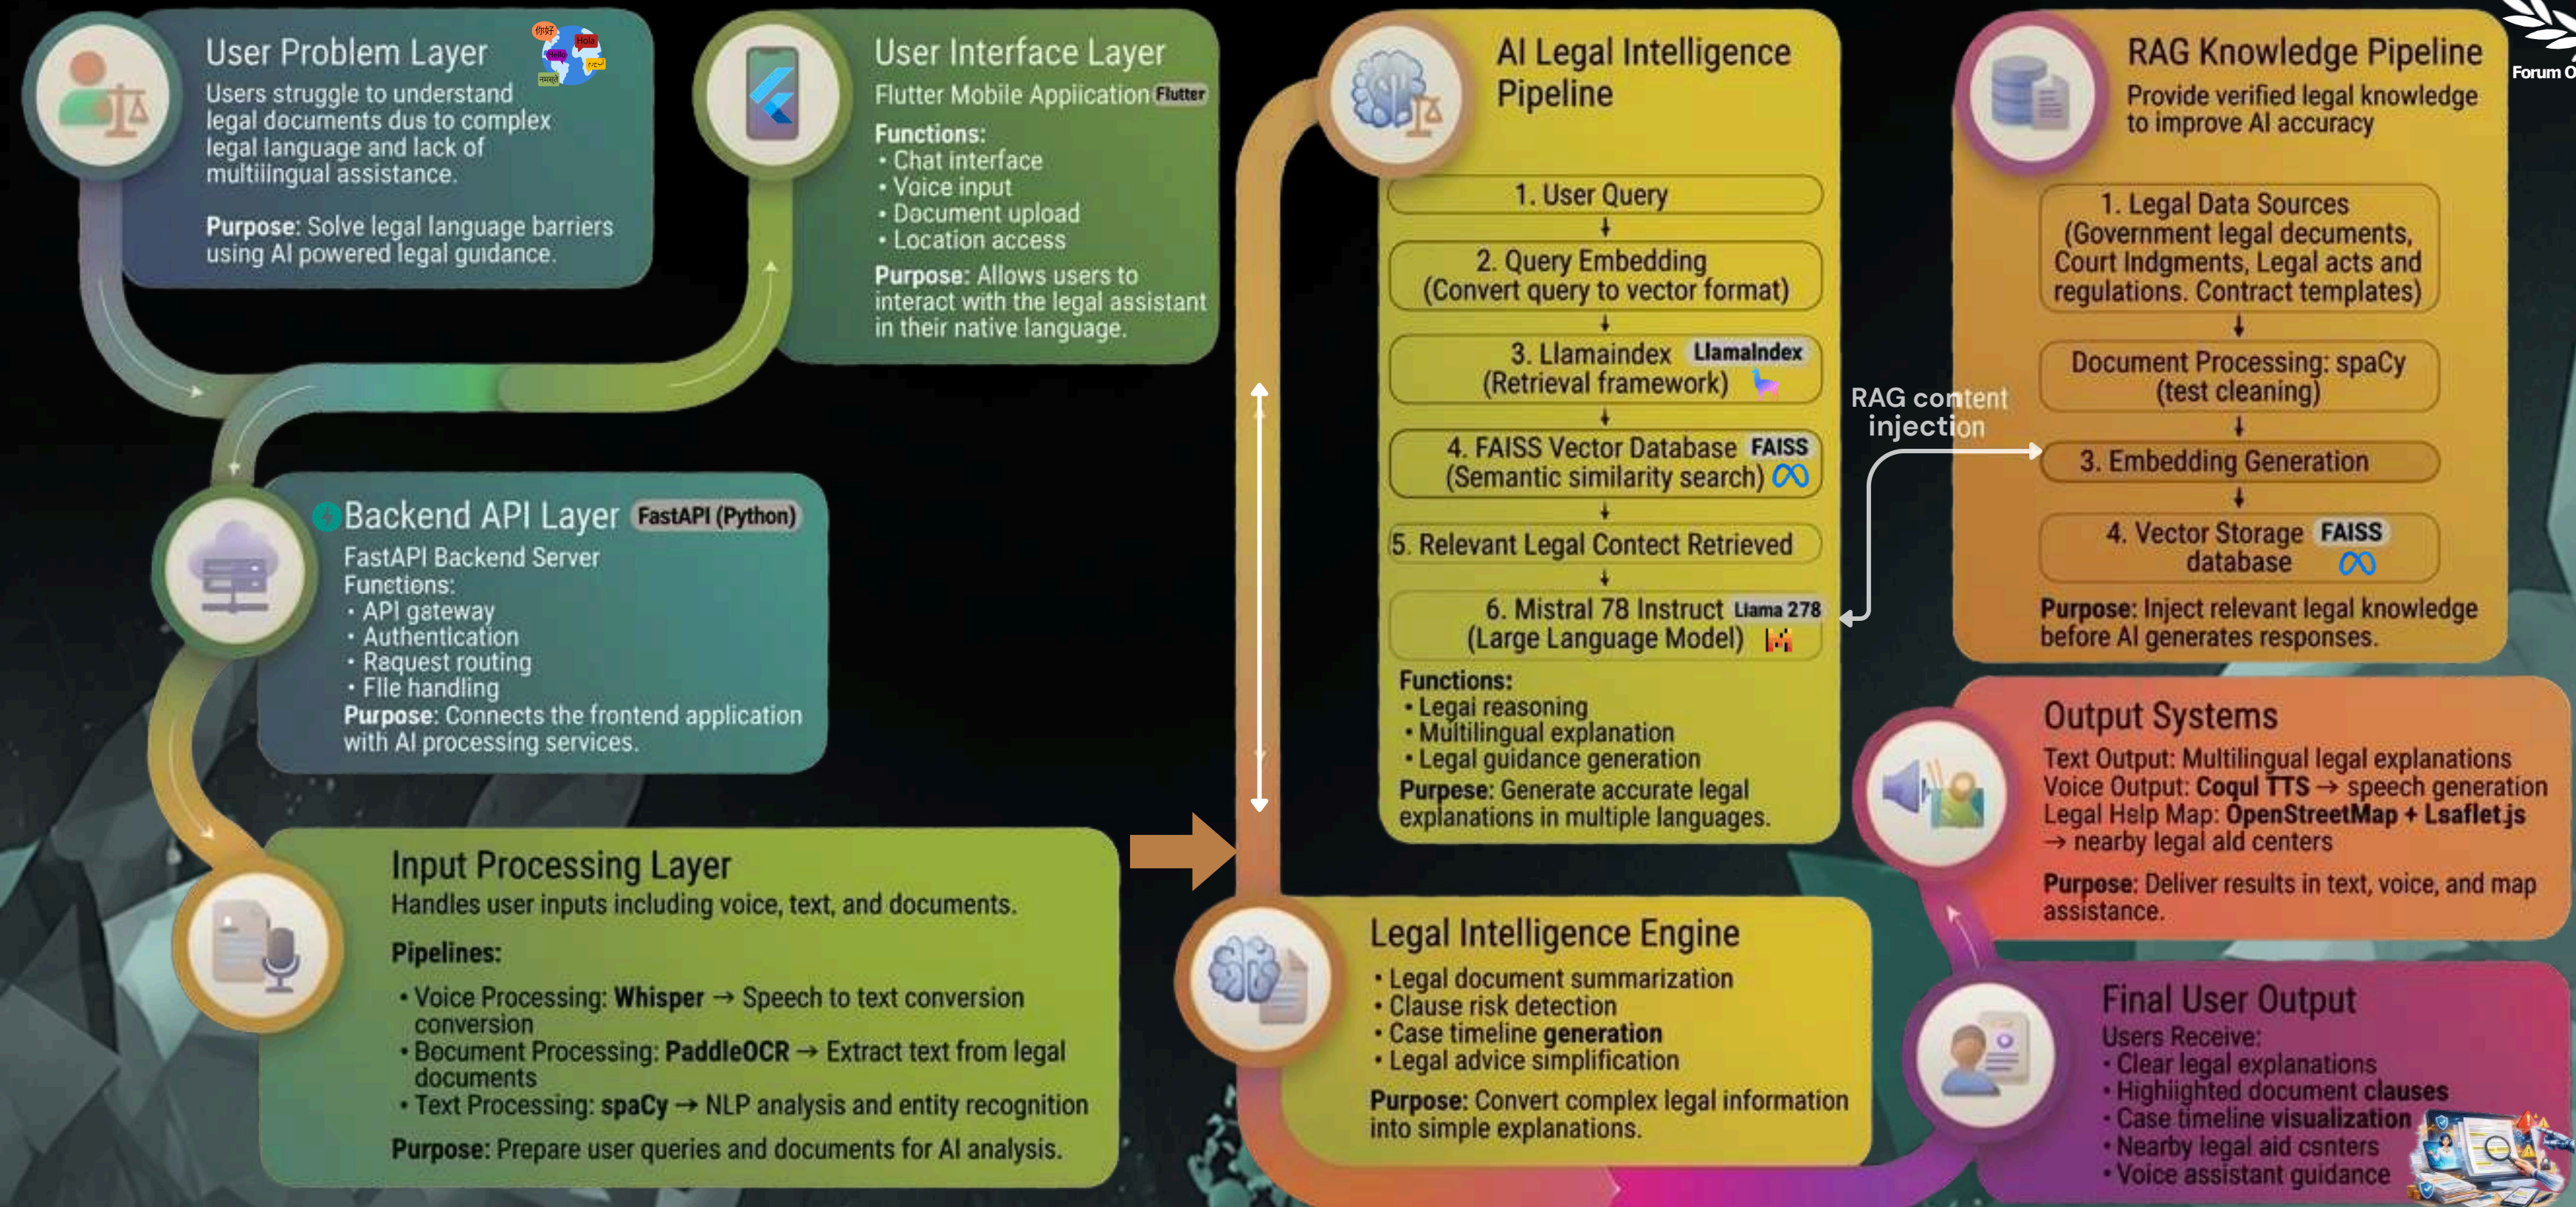

◆ ● — EASY ACCESS TO LEGAL GUIDANCE AND HELP

The platform uses location services to help users find nearby lawyers, legal aid centres, and government offices. It also works in offline or low-internet areas, so people in rural places can still get basic legal information. The system gives quick legal guidance so users can understand the next steps before going to a lawyer.

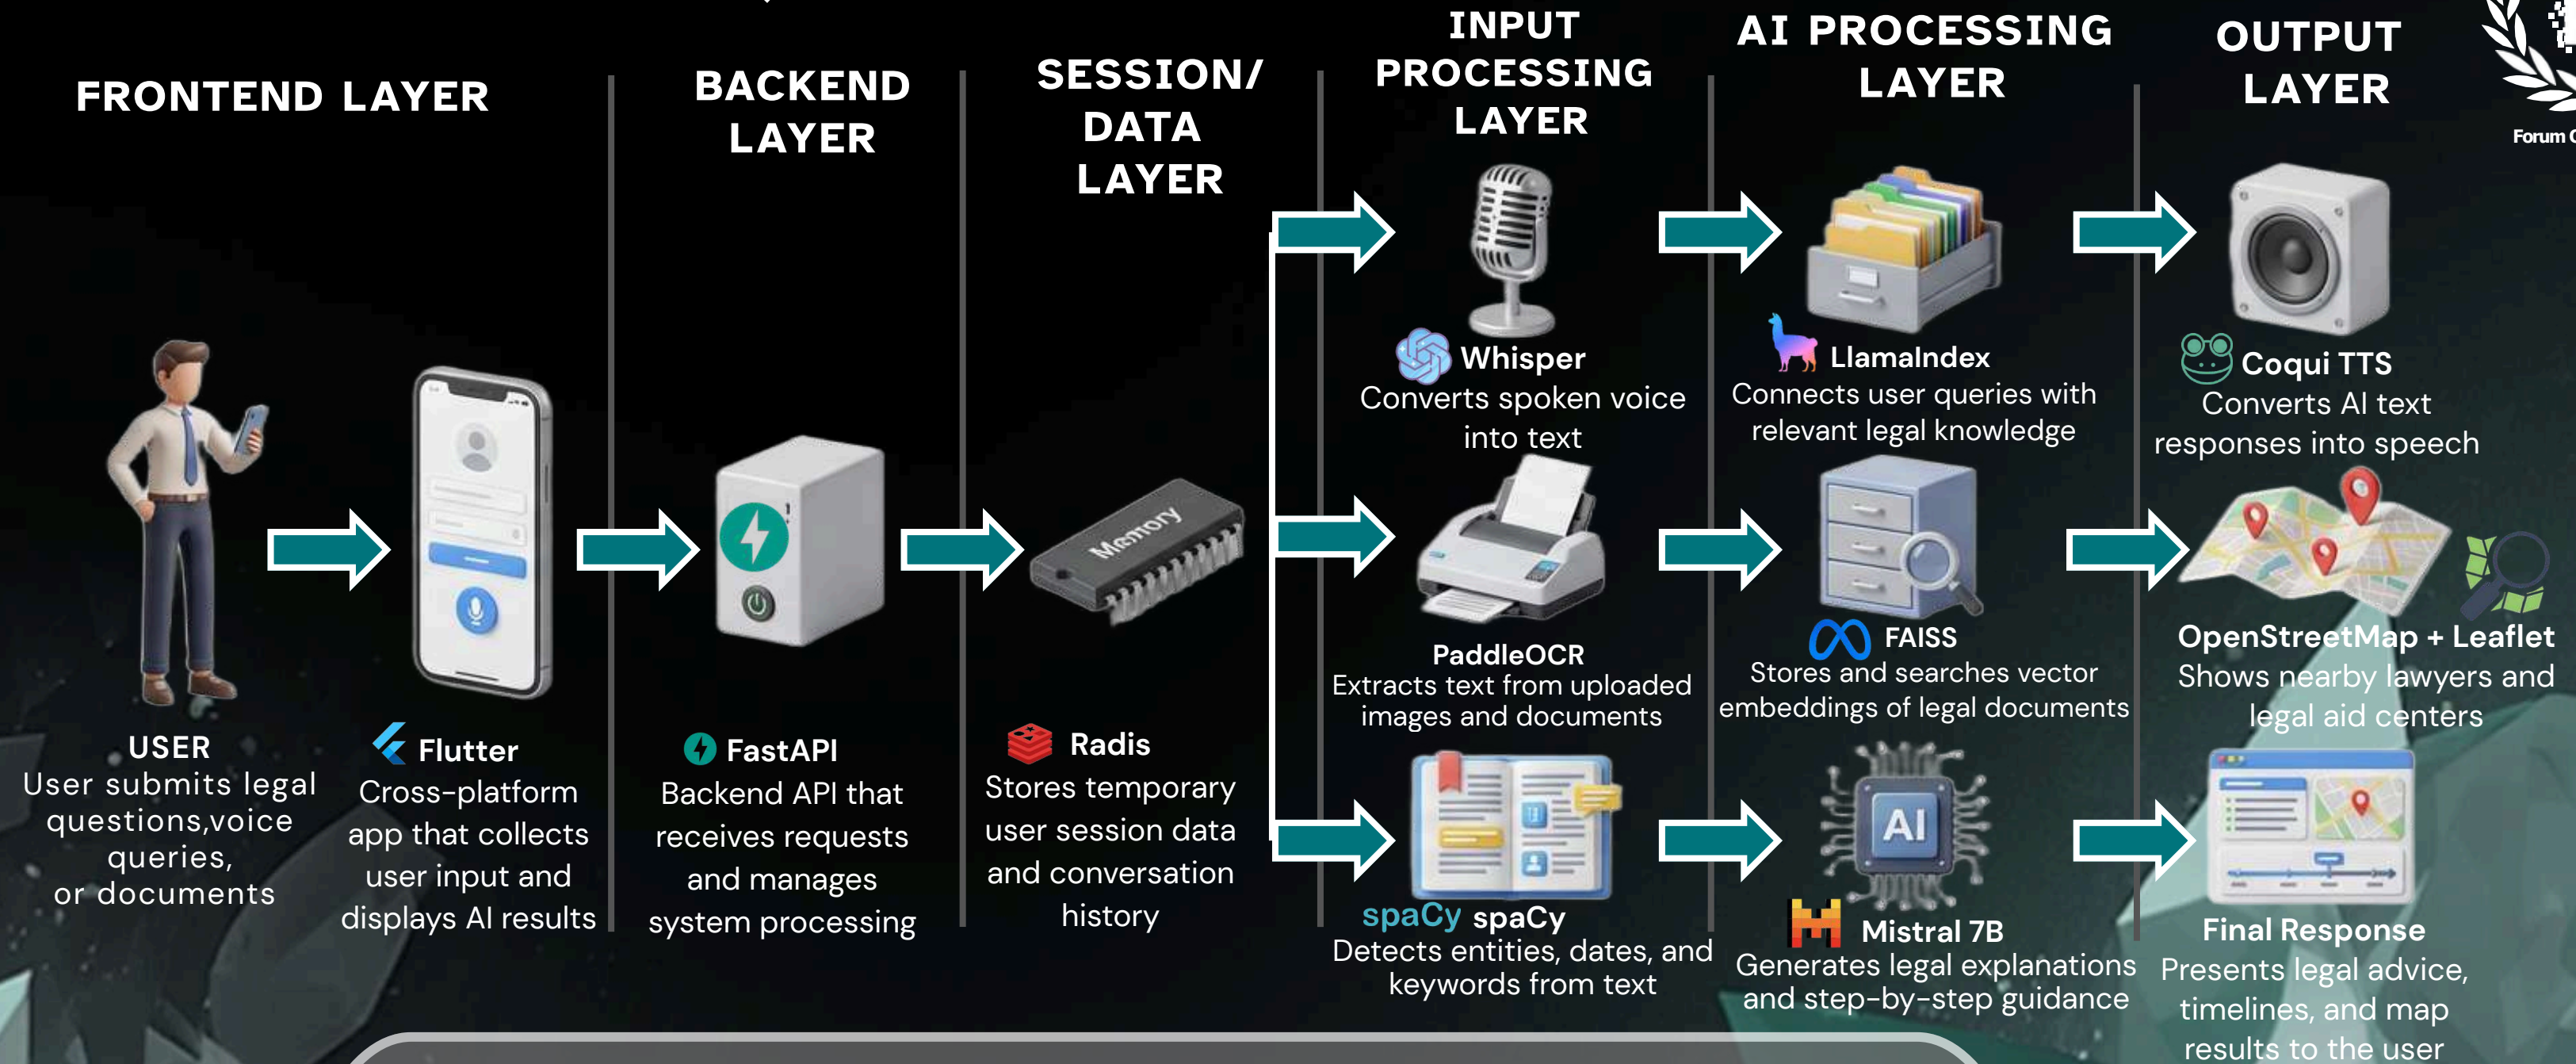

◆ ● — AI-BASED DOCUMENT ANALYSIS AND FRAUD DETECTION

Users can upload contracts, legal notices, or document images. The system will extract text using OCR, highlight key clauses, explain the document in simple terms, and detect possible fraud or risky conditions.

FLOW DIAGRAM

TECHNICAL REQUIREMENTS

TECH STACK

NOVELTY / USE CASE

NOVELTY

USE CASE

Multilingual AI Legal Assistant

Gives legal help in regional languages so people can easily understand legal information

RAG with Trusted Legal Sources

Uses verified legal data to provide accurate and reliable answers

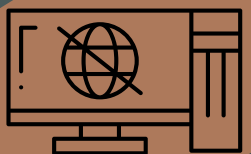

OCR Document Analysis with Fraud Detection

Reads legal documents and highlights risky or fraudulent clauses

Offline Access for Rural Areas

Works in low-internet or offline mode to help people in rural areas

Public Legal Awareness

Helps people understand their legal rights and legal procedures

FIR and Complaint Guidance

Shows simple steps to file police complaints and legal cases

Support for Victims

Provides legal guidance for victims of fraud, harassment, or violence

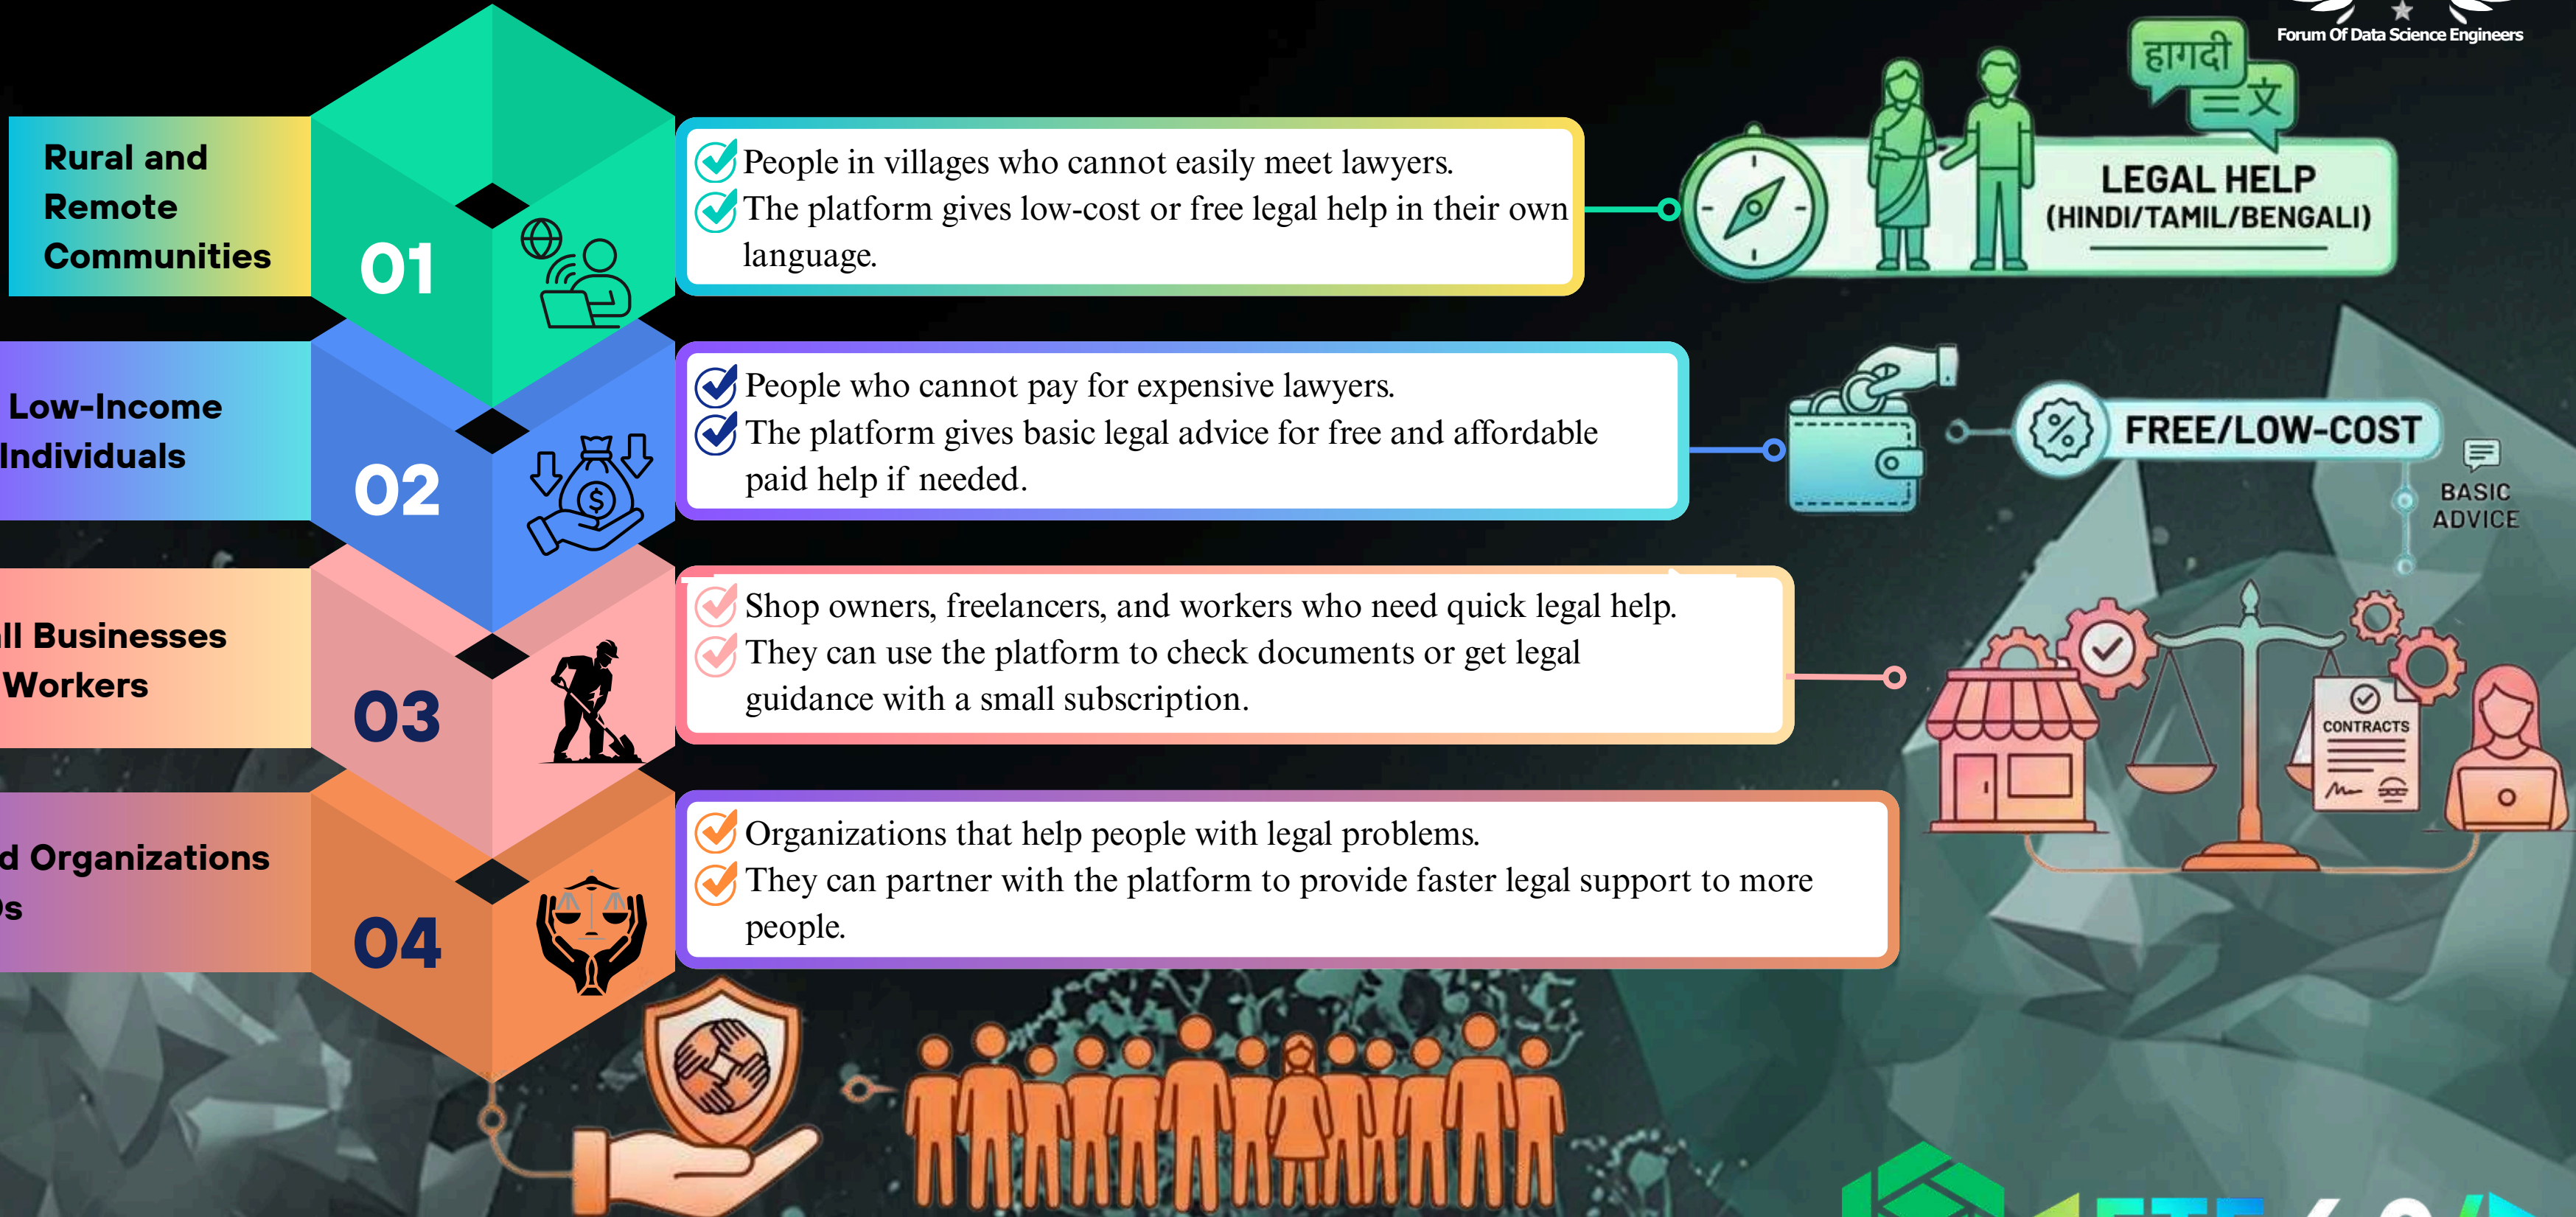

Contract Understanding and Legal Aid

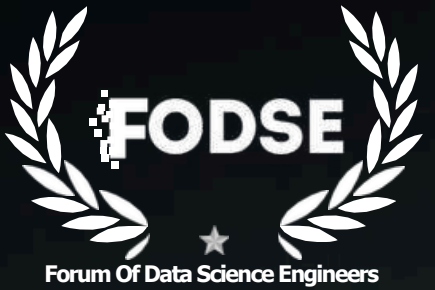

Explains contracts and helps users find nearby legal services

BUSINESS MODEL / TARGET MARKET
